The IPK (International Patent Cooperation Treaty) convention provides a method of representing patents, especially trademarks, by means of special symbols. Thereby, it is possible to show representations of a patent on an electronic communication system (including a mobile telephone or computer, for example) so that a user can check if the communication system is infringing the patent. In a case of an electronic communication system, the term "communication system" means, in particular, a radio telephone, a mobile telephone, a paging receiver, a computer, a personal digital assistant (PDA), a computer with a display screen, a computer with a keyboard, a pocket PC, a portable PC, a data processing device and the like, and comprises applications which have to be used for the implementation and use of such communication systems. Examples of applications to be used in mobile telephones are the display of telephone numbers, the Internet access, the sending and the receiving of text and voice data, the display of media contents, the electronic mail or the display of documents and other data, etc. In this case, the trademark or patent is represented on the electronic communication system by means of a representation which can be displayed on the communication system and which is stored in a database of the communication system. The database and the representation are, in
